

KitPC is a specific optional accessory for the KitLift series, used to manage users of unlimited installations in total autonomy.

The Kit consists of a **USB device** and the **BASEZ5R** software.

The USB device supports **iButtons**, **Badges**, **Tags**, **433 MHz radio controls** and **Z-5R** controllers, allowing for immediate communication to and from the PC on which **BASEZ5R** is installed.

The BASEZ5R software is a simple and intuitive application, also practical for less tech-savvy users. It can be used for:

- **Naming the keys**
(personal key: name and surname)
- **Adding, removing and suspending** keys
- **Setting** the authorization duration of each controller
- **Defining** key properties: normal and blocking
- **Organizing** keys
(specific databases: name of facility)
- **Customizing** databases by destination
- **Saving and exporting** each databases in different formats
- **Printing** the report of the keys present in a database
- **Searching** by key or by user
